Profile Summary

Entry-level Data Analyst and B.Tech Computer Science graduate with Python, SQL, Pandas and Power BI skills, backed by three Innomatics Research Labs certifications. I scrape, clean and analyze raw data to find pricing and demand patterns, and I present the findings in clear charts and dashboards. I also built a secure RAG document-chat app, which shows I pick up new tools quickly. Seeking a Data Analyst role where I can turn data into decisions.

Technical Skills

- **Languages :** : Python, SQL.
- **Data analysis :** : Pandas, NumPy, data cleaning, preprocessing, exploratory data analysis (EDA), basic statistics
- **Visualization:** Power BI, Matplotlib, Seaborn
- **Data collection:** Web scraping with Requests, BeautifulSoup, Selenium and Regex
- **AI / applications:** Retrieval-Augmented Generation (RAG), vector embeddings, Qdrant, Gradio
- **Tools:** Jupyter Notebook, Git, GitHub, VS Code, Colab.

Project

Web Scraping and Analysis of India Tour Packages (TravelTriangle) **Feb 2026 – March 2026**

Developed a data analytics project by scraping tour package data from TravelTriangle to analyze travel trends, pricing patterns, and customer preferences. Performed data cleaning, transformation, and exploratory data analysis (EDA) to generate actionable insights.

- Developed a Python-based web scraping solution using Requests and BeautifulSoup.
- Extracted structured information from TravelTriangle, including package prices, destinations, duration, and services.
- Implemented data cleaning, preprocessing, and transformation using Pandas and NumPy. Regex to extract and standardize pricing, discounts, and package details.
- Automated data collection and performed analysis to identify pricing patterns and travel trends.
- Languages Used in Project:
- Programming: Python
- Libraries: Pandas, NumPy, Matplotlib, Seaborn
- Tools: Jupyter Notebook

Secure Document Chat RAG Application Feb 2025 – Jan 2026

Developed a secure AI-based document chat application using Retrieval-Augmented Generation (RAG). Implemented document upload, text chunking, vector embeddings with Qdrant, and LLM-powered question answering. Integrated encryption, authentication, and an interactive Gradio chat interface to ensure data privacy and accurate responses.

- Python-based application development.
- Document processing and text chunking.
- Implemented a secure Retrieval-Augmented Generation (RAG) system for accurate document-based question answering.
- Used vector embeddings and Qdrant database to enable fast and relevant information retrieval
- Ensured data privacy and security through encryption, authentication, and controlled document access.

  document ingestion, semantic retrieval, and LLM-based response generation into a unified Generative AI

application.

- Technologies: Python, RAG, Qdrant, Vector Embeddings, Gradio

Certifications

Data Analyst : : Exploratory Data Analysis(EDA) From Innomatics reserch lab. Cirtificate id : M_303546
Python Programming : : Python Programming From Innomatics reserch lab. Cirtificate id : M_302898
Data Visualization : : Power BI Desktop From Innomatics reserch lab. Cirtificate id : M_204174

Education

HSC August 2019 – May 2021
Specification "Science" Percentage: 78%

MSBTE, Jalgaon August 2021 – May 2023
Diploma in Computer Science Engineering Percentage: 57%

Sandip University, Nashik August 2023 – May 2026
Bachelor of Technology (Computer Science Engineering)
CGPA: 7.53/10
